**Olympic Sustainability**

With the Olympics officially underway, there is much talk about the sustainability efforts put in place for the games! Here are some interesting facts about how London has gone green for these Olympic games:

- The waste from the buildings that were torn down was used to make new bridges in the park.
- The Olympic Stadium is the lightest one ever built and used as much recycled material as possible and only one tenth of the amount of steel as the one built in Beijing!
- Over 4,000 trees, 300,000 wetland plants, and 130,000 other plants were planted in London’s Olympic Park.
- No waste from the games will be transported to a landfill. It will be recycled, reused, or composted.

**Science Spotlight:**

**Breakthrough at MSU**

MSU continues to make a difference in the world through research! In 2011 the deadliest E. coli outbreak in history devastated Germany. Now, a year later, MSU researchers have decoded the strain that caused the outbreak and have even found a way to potentially control it! Since this particular E. coli strain had never been seen before the 2011 occurrence in Germany, this was a huge breakthrough discovery. Research will continue to find a way to stop its growth altogether.
